Longitudinal Report on Content

Waves A (2001/02) to K (2012)

JUNE 2014

How to use this report

This report is intended to be a useful tool to:

- ✓ Access the contents of the PaD questionnaires for all the waves (from the 1st to the 11th) through an agile and interesting material
- ✓ Understand the correspondence between the questionnaires and the variables included in the code books and in the data files.

This report contains all the variables that have appeared in any of the editions of the PaD, except those that only appeared in the 1st Wave (the years 2001-2002).

Variables are organised by subject in **10 themed blocks**:

1. Identification and survey management data
2. Personal and family circumstances
3. Regulated and unregulated education
4. Employment, childcare and work-life balance
5. Use of time
6. Housing
7. Economic circumstances
8. Health and disabilities
9. Social position and relations
10. Values and attitudes

Within each of the themed blocks, variables a shame subject of study are grouped together in **sub-blocks o subject-specific items**.

1. Identification and survey management data	1.1 Individual and household identifiers
	1.2 Contact with household
	1.3 Arrivals and departure in the household
	1.4 Basic details of the household and the people who live in it
	1.5 Participation in the household
	1.6 Handling of the gift
	1.7 Assessment of the household (according to surveyor)
	1.8 Household monitoring data
	1.9 Weighting variables
2. Personal and family circumstances	2.1 Details of parents
	2.2. Family background
	2.3 Couple
	2.4 Children
3. Regulated and unregulated education	3.1 Educational path in the past
	3.2 Highest level of education
	3.3 Regulated education since last interview/in the last 12 months
	3.4 Non-regulated education since last interview/in the last 12 months
	3.5 Qualifications
	3.6 Current regulated education
	3.7 Current non-regulated education
	3.8 Expenditure on schooling

10. Values and attitudes	10.1 Satisfaction with life
	10.2 Values regarding migration
	10.3 Concerns
	10.4 Prospects and attitudes to life

Each of the variables is accompanied by the following information:

3.2 Highest level of education

Label	Questionnaire Variable Code	Data File Variable Code	Frequency	In wich Waves	Eliminated/ Absorbed
Highest level of education completed (according to principal informant)	E025011L	E001001EG3; E001001EG3R1	Core	1 2 3 4 5 6 7 8 9 10 11	
U1: specify highest level of education completed	E025012L	E001001EG3; E001001EG3R1	Core	8	E
Specialisation of the highest year or level completed (according to principal informant)	E102011L	E033001ER1H1; E033001ER1G1	Core	10 11	

- ✓ **Label:** this indicates the content of the variable.

Where variables contain individual information provided by the principal informant, the household questionnaire includes the phrase "according to principal informant" in the label related to the variable containing such information. See as an example the image above with the 1st variable ("Highest level of education completed (*according to principal informant*)")

- ✓ **Questionnaire variable code:** this indicates the name of the questionnaire variable. With this code you'll be able to view the features of the variable in the questionnaires of the different PaD Waves, the response codes, the Guide to the Survey...) Questionnaires are available at <http://www.obdesigualtats.cat/index.php?cm=18>

Generated variables without a direct correspondence with a questionnaire variable have got a dash (-) in this field. For example, weighting variables generated before the delivery of data files show a blank in the field "questionnaire variable code" (see image below)

1.9 Weighting variables

Label	Questionnaire Variable Code	Data File Variable Code	Frequency	In wich Waves	Eliminated/ Absorbed
Weighting	-	W010001E	Core	1 2 3 4 5 6 7 8 9 10 11	
Weighting (population in Catalonia according to municipal census)	-	W010002E	Core	1 2 3 4 5 6 7 8 9 10 11	

- ✓ **Data file variable code:** this indicates the name adopted by the variable after data processing and purging. In most cases the code is the same as that of the questionnaire variable. However, some variables have their name changed after data processing and purging (harmonised variable, recoded variables, imputed variables...) In such cases, it is indispensable to indicate the correspondence between both codes in order to make it as easy as possible to find the information.

Code books are available at: <http://obdesigualtats.cat/english>

Variables that, despite being included in the questionnaires, are not dumped into the data files have got a dash in the field "data file variable code".

This is the case for variables such as the one in the image below ("specify highest level of education") In this case the variable, despite being collected in the questionnaire, does not appear in the data files

because the number of remarks is under five per cent, and this percentage is the minimum required for a variable to be dumped in to a data file.

Other examples of variables that are not dumped into data files are internal management variables, in order to protect the anonymity and privacy of the individuals in the sample (name, surnames, address, etc.)

✓ **Frequency:** this indicates the frequency with which the variable is gathered. 4 types of frequency must be distinguished:

- Core: variables that are gathered for each wave.
- Structural core (s.Core): variables that are gathered only once, because the information they contain does not vary (for example the language spoken during childhood)
- Cyclical (Cycl.): variables that are gathered for several PaD. Depending on the cycle they have been assigned, the frequency with which they appear may vary.
- Sporadic (one): variables that have only appeared in one PaD wave.

!! It must be said that in some cases actual periodicity does not match exactly with the theoretical definition. You may find some variables that are defined as core and, in fact, they have only appeared in on or two waves.

✓ **In which waves:** this indicates which waves the variable has appeared in.

✓ **Eliminated/Reabsorbed:** this indicates all the variables that have appeared in any of the PaD editions, and that have been excluded from questionnaires in subsequent waves. They are identified with the initials E (eliminated) or R (reabsorbed). A distinction must however be made between an "eliminated" variable and a "reabsorbed" variable.

- **Eliminated:** These are variables that are excluded from the questionnaire on a permanent basis, without including a variable of a similar subject to fill in the gap. This is the case of the variable "biggest expense in last year". At some time a decision was taken to remove this variable from the questionnaires because it lacked of interest, but a new variable of a similar subject has not been included in the questionnaire to fill in the gap.
- **Reabsorbed:** These are variables that have been excluded from the questionnaire on a permanent basis, but that have been replaced with variables of a similar subject, which allows for a certain level of continuity with the information being gathered. This is the case of the variable that gathers in an aggregate manner the amount of the orphan's pension, widow's pension and those of family members. Based on recommendations made by an analyst, a decision is taken to disaggregate this variable in 3 parts, one for each pension. For this reason, the removal of the variable from the questionnaire is not indicated as elimination but as reabsorption, since, although in a different way, the information continues to being gathered.
